

ID Solutions

Identification is an important issue within organisations of all sizes, but has traditionally only been affordable by the largest businesses. SG World has used their experience in the business environment to create a range of affordable solutions.

If your requirement for cards is relatively small, SG World's in-house bureau service is the best option. You simply place requests for cards as and when you need them.

Cards can be provided with inbuilt security features to work with any existing systems you may have and contain your own design.

SG World also provides a comprehensive range of accessories for displaying your ID cards. Choose from our stock of popular products or choose to have your accessories personalised with your details.

For the larger user, SG World's Safe-ID product provides the answer.

Using the simple piece of software and specialist plastic card printer, cards can be produced on site, as and when required. This significantly reduces the cost per card when producing larger volumes, for students for example.

The Safe ID package comes in three options dependent upon the range of features required and can be easily upgraded as your needs change.

Cards can be provided with inbuilt security features and allow you to create your own card design or even a range of designs for different purposes.
