

Safe-asset

Safe-asset
Asset Management System

FORMERLY SAFEGUARD SYSTEMS EUROPE

Safe-asset – highly flexible without being over complicated.

Answers all the day to day needs of managing assets.

It is simple to use, allows fast data entry and instant status reports.

Safe-asset is highly flexible without being over complicated. While the focus will always be physical asset management, it can be quickly tailored to register any human activity, such as training records for example.

We have resisted the temptation to 'over-engineer' Safe-asset in order to minimise training, and anyone with a modest knowledge of data input can become familiar with all the functions within one hour.

Safe-asset works in conjunction with asset labels or RFID microchips to record a whole range of asset specific information in a single, easy to use system.

Safe-asset
Asset Management System

The straight forward approach to managing your assets.

Fast data input and easy reporting allows Safe-asset to manage all the business 'chores' of tracking, auditing, managing inspection records and recording depreciation & values in one program. We are even using it to track the issue of its own licences! With the allocation of barcodes to rooms or buildings, the audit function is completed both accurately and at great speed compared with a manual approach.

Other benefits include:

Our research shows its price is well below comparable software. <
It can be upgraded to any requirements, and current property records may be imported en bloc. <
It can track any activity that needs recording, not just fixed assets. <

Safe-asset allows for user defined views so that for example, the IT manager can see a set of asset information that is totally appropriate for him or her, but different from the information that the auditor may want to see, or the purchasing department may want etc, all within the same database.

How can Safe-asset help you?

- > Improved asset visibility over who has what, where and for how long.
- > Compatible with both barcode and RFID microchip identification systems of which a full range is available, depending on the assets to be tagged.
- > Depreciation management.
- > Default views and user defined data tables.
- > Fast point and click data entry and multiple database creation.
- > Search and filter capabilities, tracks live, missing, and disposed property.
- > Standard or customised reports.
- > Software licence management.
- > Theft deterrence and recovery of stolen property through covert proof of ownership.
- > Improved audit trails.
- > Can import existing whole asset registers and sequential numbering systems.
- > Promotes up to date values for insurance and potential for premium discounts.
- > Maintenance logs, PAT test records etc.
- > No expensive contracting costs or training needs.
- > Full built-in user guide and training database included.

Technical specification.

Safe-asset is designed to be used with a portable laser scanner to enable easy auditing of assets and tracking of items within your business. Safe-asset connects via ODBC to the Access database on a local or networked computer. There are no third party ODBC drivers required and the system can run on the drivers shipped with most Microsoft operating systems. Safe-asset uses Active Reports Engine to generate reports and the installation package is created by Installshield version 6.3.

We supply:

- > Safe-asset software.
- > Asset labels designed to your requirements.
- > Portable barcode or RFID scanner.
- > Helpdesk support between 9.00am to 5.00pm, Monday to Friday.
- > Half day training.
- > Half day installation.
- > A replacement scanner within 24hrs in event of breakdown.

You supply:

- > A computer that satisfies all technical specifications as shown.
- > Administrator log on passwords or a network administrator at time of installation.

System Requirements:

- > Windows 2000:
300MHz Pentium PC or faster, 128MB RAM.
- > Windows XP Professional:
300MHz Pentium PC or faster, 128MB RAM
- > Windows NT 4.0 Sp 6:
Pentium PC or faster, 64MB RAM.
- > Windows 98:
Pentium PC or faster, 32MB RAM
Resolution 1024 x 768.
