Electronic Visitor Management System

Control and identify all visitors to your premises with a professional software package.

Do you know how many visitors are on site and where they are?
Do you know all the faces in your building?
Do you have an accurate fire list of your visitors?

Safe-pass
Visitor Management System

No one knows more about visitor management than SG World. With almost 25 years of experience in the field, we now bring you this experience in one simple software package.

Safe-pass distills all of our experience in visitor management into an easy to use windows-based visitor pass system. From pre-booking visitor's to issuing a personalised pass, Safe-pass gives you complete control over all visitors to your premises.

Pre-booking of visitors is done by using a fully intranet-enabled module allowing each member of staff to pre-book their own visitors from their own PC. The laser scanner is a fast and efficient way of checking visitors in and out. Your scanner is connected to the main PC that is used for operating Safe-pass. It also connects to a power supply. By using the Safe-photo module, users can also take and place a visitor's colour photograph onto the pass for extra security.

Incorporating all the features and benefits of our successful paper-based Visitors Pass System, Safe-pass is Windows-based software that offers flexibility and ease of use.

How can Safe-pass help you?

- > Pre-book all visitors in advance of their visit, increasing reception efficiency.
- > Identify and validate all visitors on your premises.
- > Produce detailed reports by visit, host, company, date etc.
- > Produce emergency evacuation list of visitors at the touch of a button.
- > Inform visitors of all Health and Safety regulations whilst on site.
- > Enhance the professional image of your organisation.
- > Know who is on site and where they are at any time.
- > Bar code reader facility for efficiently checking visitors in and out.

Technical specification.

Visitor Management Software designed to be used with optional laser scanner, touchscreen and visitor pre-booking modules for increased efficiency. Safe-pass connects via ODBC to a relational database on local PC or over a local or wide area network. The default database is Access 2000, which utilises the Access runtime engine or can be upgraded to SQL Server or Oracle. There are no third party ODBC drivers required. The system can run on the drivers shipped as standard with Microsoft's operating systems. Safe-pass uses Seagate Crystal Report's version 8 as its report engine. Safe-pass installation is created by Installshield standard edition 6.2.

We supply:

- > Safe-pass software.
- > Pre-printed personalised passes.
- > Helpdesk support between normal working hours 9.00am to 5.00pm, Monday to Friday.
- > A half day's training for up to five people.
- > One free upgrade during period of licence.
- > A replacement printer or laser scanner within 24 hours in event of breakdown.

You supply:

- > A computer that satisfies all technical specifications as shown.
- > Administrator log on passwords or a network administrator at time of installation.

System Requirements:

- > Windows 2000:
300MHz Pentium PC or faster, 128MB RAM.
- > Windows XP Professional:
300MHz Pentium PC or faster, 128MB RAM.
- > Windows NT 4.0 Sp 6:
Pentium PC or faster, 64MB RAM.
- > Windows 98:
Pentium PC or faster, 32MB RAM
Resolution 1024 x 768.

Recommended Security:

Safe-pass is not a heavy transaction-based system and therefore uses standard security features within Microsoft Windows. For any web access outside an intranet it is recommended that a reliable firewall technology should be employed to guard against unauthorised access.
